

sygénnyx[®] brings
advanced Cellular Biologics
to the veterinary field.

We Offer

complete sterile 100% closed systems

for the safe and efficient
collection, processing &
administration of Platelet
Rich Plasma and Stem
Cells at the Point Of Care.

www.sygenesis.com

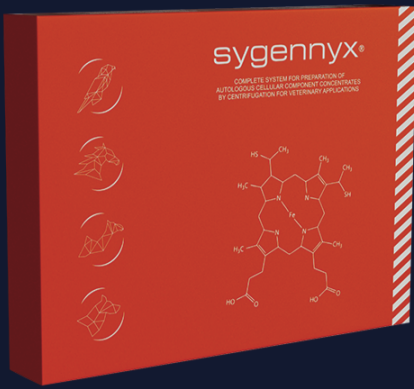

Our technologies deliver out-
standing results to debilitating
injuries, fractures and degenera-
tive diseases and give profes-
sional racers the opportunity to
once again be the athletes they
deserve.

VETPLEX™ PRP

VETPLEX™ PRP is an innovative, clinically proven, 4th Generation PRP system. A staple to any regenerative treatment, it yields high Platelet recovery and sample concentrates (7-9x baseline), rich in growth factors and cellular potency. Sterile, 100% closed system for safe sample collection and processing under any condition, on the field or in a clinic setting.

MedulOS™

The MedulOS™ Bone Marrow Aspirate Concentrate (BMAC) system enables fast and safe harvesting, concentration and recovery of active myeloid stem cells with minimal processing at the Point Of Care. Special trocar design and aspiration dynamics optimize cellular quality, viability and yields. Minimally traumatic, 100% closed and simple-to-use, MedulOS™ offers rapid and painless access to BMAC Mesenchymal Stem Cells, a proven solution to musculoskeletal pathologies.

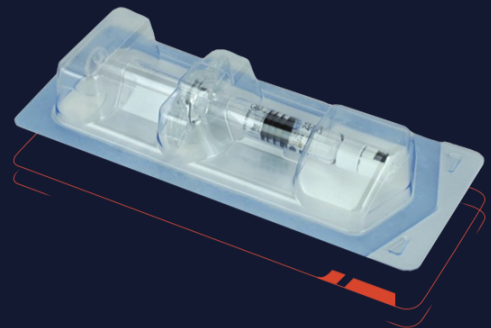

VETSTEM™

The Adipose-Derived Stem Cells (ADSCs) obtained from subcutaneous fat with the VETSTEM™ kit offer maximum tissue healing in minimum volumes. Fat is suctioned through special, thin, atraumatic, multi-perforated cannulas, for aseptic processing in special containers. ADSCs are released and purified into a homogenous mix of pluripotent stems cells, at ultra-high concentrations. 100% closed system for easy processing under any condition.

HyANIMA™

HyANIMA™ is a colorless, high Molecular Weight, crosslinked, viscoelastic Hyaluronic Acid solution that comes prefilled in sterile syringes, ready-to-use for effective synovial joint lubrication. HyANIMA™ is not an animal-derived polymer. It is exclusively extracted and refined by high-tech bio-engineering fermentation metabolites with excellent tissue biocompatibility and long-lasting action.

We introduce a series of specialized horse care products designed and manufactured using natural ingredients extracted from the flowers and seeds of plants in the Mediterranean. We aim to promote the comfort and well-being of racing horses as well as enhance and prolong the beneficial effects of our Biologic Treatments.
